RE: Plant #591 - Application #17883, Minor Modification of Title V Permit

Dear Ms. Smith:

This is to advise you that the Bay Area Air Quality Management District has made minor modifications to the Major Facility Review Permit for East Bay Municipal Utility District (EBMUD) – Plant #591.

As you requested, Permit Condition #278 was modified to allow the operation of (1) IC engine simultaneously with (1) boiler (instead of all the boilers operating together or 2 of the 3 IC engines operating together). In addition to the requested wording changes (Parts #4 and #5), please note that Part #2 was added to cite the CO limit for the engines, Part #6 was added in reference to the low usage exemption for the boilers, and Parts #10 and #11 were added to satisfy periodic monitoring requirements for the boilers. Also, the previous Part #5 (now Part #7) was modified to add recordkeeping requirements for the boilers.

In addition to the specified changes to the permit conditions, administrative amendments were made to the permit to reflect the federal enforceability of District Regulation 9, Rules 7 and 8 which have recently been approved by the EPA into the State Implementation Plan (SIP). This action is also deemed to be a minor permit modification because sufficient monitoring is currently in place for the boilers and IC engines to meet federal monitoring requirements.

A copy of the modified Major Facility Review Permit is enclosed for your records. If you have any questions on this matter, please call **Ted Hull, Air Quality Engineer II at (415) 749-4919**.

Very truly yours,

Ellen Garvey
Executive Officer
Air Pollution Control Officer
